

BioVex[®] Disinfecting Solution For Healthcare Facilities Applications

BioVex[®] provides the operators of healthcare facilities a safe and convenient system to reduce the spread of blood borne pathogens and communicable infections from non-porous surfaces throughout their facilities.

The proprietary blend of oxychloro chemistry of BioVex[®] provides disinfection by attacking the surfaces of microbes and breaking them down. It works immediately on contact, and remains working until dried. No residual active compound is left behind so no rinsing is required. BioVex[®] is also an excellent deodorizer.

BioVex[®] is designed to be diluted with a fixed amount of water to create an affordable yet effective sanitizer that can be used daily, or more often on problem contact areas or in special target areas.

The simple system only requires that the included activator be mixed with the BioVex[®] concentrate in its container. After a few seconds of mixing, the activated concentrate is then added to tap water as directed. It is then ready to go to work solving your sanitation challenges.

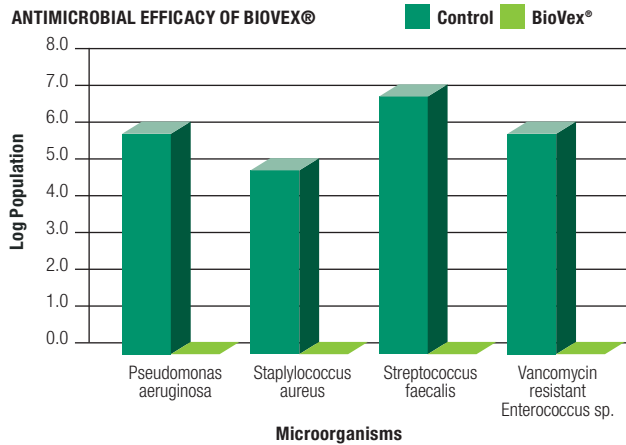

BioVex[®] is used in the following areas for disinfection and odor control:

- | | |
|-----------------|-------------------|
| Patient rooms | Examination Rooms |
| Laboratories | Ambulances |
| Emergency Rooms | Surgery |

BioVex[®] is often used to treat mechanical and surgical beds, walls and floors, medical equipment, laboratory surfaces, restrooms, showers, water baths, whirlpools, wheelchairs, fixed equipment, laundry rinse and a broad range of other areas.

Concentrate Properties

- Concentration: 2.00 – 2.10% available chlorine dioxide
- pH: 8.2 – 8.5
- Solubility in Water: Complete
- Very Low Acute Toxicity (EPA CAT III)
- Non-Flammable, Non-Explosive, Stable Solution
